Morphological and physiological determinants affecting yield and yield components in lentil (Lens culinaris Medik.) genotypes.

1. Sustainability and efficient management of resources in agriculture

3. Lens culinaris Medik.

4. Abiotic stresses (e.g., drought, salinity, temperature extremes)

5. Biotic stresses (e.g., diseases, pests)

6. Environmental factors (e.g., climate, soil type)

7. Genetic diversity and selection for improved traits

8. Linking agronomic practices with genetic improvement
